

## Brief History

**A**nkara Medical Faculty started to give medical education in Cebeci Hospital on October 19, 1945. It developed very fast and became a leader institution in terms of education and health care among the faculties in the country. Morphology Campus was completed and started training in 1967. In addition to Cebeci Hospital of 1100 inpatient bed capacity, Ibni Sina Hospital, with a capacity of 900 beds started to serve in 1985.

## Education System

**A**nkara University Faculty of Medicine has an integrated education system including evidence-based medicine, professional skill applications and problem based education. There is a systematic and horizontal-vertical integration between basic and clinical sciences. Normal structure and functions of the human body are taught during the first two years, while structural defects and malfunctions are taught in the third grade in an integrated way. Clinical rotations are held in Cebeci and Ibni Sina Hospitals during the fourth and fifth year of the medical education, followed by a 12-month internship period.

## Erasmus Program

**O**ur Faculty is among the officially approved centers within the Erasmus, International Mobility of University Students' Higher Education Program. The European Union funds the Erasmus program to increase the European dimension in higher education and the program provides improved communication between universities.

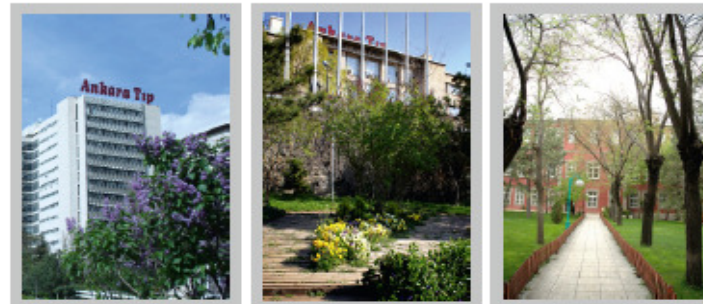

## Morphology Campus

**T**he Morphology Campus was established in 1967. Dean's Office and several administrative offices, basic science departments and four scientific research units are located in the Morphology Building. The building also has the central library and a two-storey conference hall, where all kinds of scientific and social meetings can be held. The canteen, which can serve up to 800 students takes place in front of the Morphology Building.

## Hospitals

**C**linical departments are located at Cebeci and İbni Sina Hospitals. In both hospitals, which are mentioned to be among the most modern hospitals in Turkey, we have been taking great efforts to provide high quality health care and education. İbni Sina Hospital is designed vertically with 16 floors, while the most significant feature of Cebeci Hospital is its horizontally designed location in large, green areas. The Cebeci Campus consists of 36 buildings, in which clinical departments and administrative offices are located.
